OBJECTIVE

Computer Science (Software Engineering) graduate from Arizona State University with hands-on experience in web development, mobile app development, cybersecurity, machine learning, data science, software design, cloud computing, and collaborative team projects. Seeking full-time career opportunities that use my technical and problem-solving skills to build user-centered applications and software solutions.

EDUCATION

Arizona State University, Tempe, AZ

January 2022 – May 2025

Bachelor of Science in Computer Science (Software Engineering) | GPA 3.0

SKILLS

Programming Languages: C++, Java, Python, TypeScript/JavaScript, Dart, and C

Platforms & Frameworks: ServiceNow, Now Assist, Next.js/React, Node.js, PostgreSQL, OpenAI API, Flutter, Firebase, REST APIs Developer

Tools: Git, GitHub, Eclipse, Android Studio, and Visual Studio

EXPERIENCE

ServiceNow Developer Intern

May 2026 – July 2026

KeenStack — Chandler, AZ

- Develop and customize scoped applications on the ServiceNow platform, including AI-powered intake solutions built with Now Assist Skill Kit and Document Intelligence.
- Author Business Rules to automate server-side logic and enforce data validation across records.
- Write Client Scripts to control form behavior and improve the end-user experience.
- Build UI Actions and Flow Designer automations to streamline workflows and add custom functionality to forms and lists.

Academic & Technical Foundation

Engaged in coursework and projects focusing on core computer science principles — data structures, algorithms, and object-oriented programming — applying them to real-world problem solving. Comfortable working in Linux environments.

- Developed and optimized algorithms for data processing tasks.
- Implemented object-oriented solutions to improve code modularity and reusability.
- Participated in peer code reviews and collaborative development sessions.

PROJECTS

CMDB Cockpit — AI Agents for ServiceNow CMDB Intake

July 2026

KeenStack StackUp Hackathon | Team of 3 | Next.js, TypeScript, PostgreSQL, Drizzle ORM, OpenAI API, ServiceNow Table API & IRE

- Built the ServiceNow integration layer for an AI-agent CMDB data-quality tool — a from-scratch Table API and identify reconcile bridge with module-enforced team scoping, request timeouts, and a classified error taxonomy (auth, ACL, conflict, timeout) surfaced in the UI.
- Wired a human-in-the-loop approval flow that creates CMDB identifier identification rules and promotes approved CIs through ServiceNow's Identification & Reconciliation Engine, proving on a live instance that IRE matched a duplicate record instead of creating a second CI.
- Diagnosed a duplicate-rejection error that had been misread as an ACL failure and made rule creation idempotent with a pre-insert existence check; every applied action writes a rollback snapshot first, so no change is irreversible.
- Integrated a teammate's merge executor, consolidated three divergent branches into a single deployable main, and migrated the agent pipeline to the OpenAI API — taking a run that stalled for 10+ minutes on a free-tier model to under a minute.

Rheum-Uveitis Referral Intelligence — ServiceNow AI Proof of Concept

June 2026

KeenStack | Team of 3 | ServiceNow, Now Assist Skill Kit, Document Intelligence, Flow Designer, Scripted REST APIs

- Owned the AI integration layer of a scoped ServiceNow application automating specialist referral and prior authorization intake for rheumatoid arthritis and uveitis patients.
- Built a custom Now Assist Skill Kit skill that summarizes each referral, classifies condition type, and flags missing prior authorization documentation (TB screening, step-therapy evidence, baseline labs, hepatitis screening) tuned to RA/uveitis payer requirements.
- Configured Now Assist Document Intelligence to auto-extract clinical data (labs, diagnosis, treatment history) from submitted referral PDFs, removing manual data entry.
- Engineered a Flow Designer pipeline and custom parser action that derives an explainable, deterministic AI confidence score from a clinical completeness checklist and writes enriched results back to the record as the system of record.

AI Memory Assistant — Personal Project

April 2026 – Present

Python | Retrieval-Augmented Generation (RAG)

- Building a retrieval augmented generation (RAG) personal AI assistant in Python that ingests, indexes, and retrieves personal documents to answer questions with relevant context.
- Designed and implemented a document ingestion pipeline as the foundation of the system.
- Configured a complete Python development environment and structured the project for iterative, milestone-based development.

Capstone Project: K-12 Carpooling Mobile App (Go Together Inc.)

Fall '24 – Spring '25

Team of 4 | Flutter, Firebase, GitHub, MVVM Architecture

- Developed a cross-platform mobile app for secure school carpool scheduling.
- Implemented features such as login/sign-up screens, profile setup, trip scheduling, and real-time updates.
- Collaborated using GitHub and conducted weekly agile sprint meetings with stakeholders.
- Integrated Firebase Authentication and Firestore for data storage and retrieval.

WORK EXPERIENCE

Food Runner

October 2024 – Present

Luna by Giada @ Caesars Republic Scottsdale

- Delivered dishes with precision and elegance in a high-volume, upscale dining environment.
- Communicated closely with servers, chefs, and kitchen staff to ensure seamless food flow and efficient service.
- Anticipated guest needs by clearing and resetting tables, assisting with dietary requests, and providing menu knowledge when necessary.

Sales Associate

October 2025 – January 2026

ALO Yoga (Biltmore)

- Provided premium, personalized customer experiences aligned with ALO's luxury wellness brand values.
- Built strong client relationships through knowledgeable product recommendations on performance apparel, fit, and styling.
- Collaborated with team members to drive store performance, support peak traffic periods, and maintain brand excellence.

Valet / Front Desk

September 2021 – December 2025

Esplanade Place Condominiums

- Greeted residents and guests, assisting as needed.
- Retrieved and parked residents' vehicles for arrivals and departures.
- Managed surveillance and security during shifts.

MAC Leader

August 2019 – May 2023

Madison Elementary School District (Childcare)

- Provided supervision and education to elementary and middle school students.
- Facilitated various activities including snack time, homework study, and recreational play.
- Planned and led age-appropriate educational and recreational activities for the children.
